Brifen's TL-4 Z-Post System & MGT

**For more Information
Contact—**

Depending on project requirements the NCHRP 350 TL-4 Z-Post length of need (LON) barrier can be terminated using the Brifen MASH Gating Terminal (MGT). With the MASH test rating and simplified, in-line design the MGT has a no-release cable feature and fewer parts. Consider using the MGT as a terminal upgrade when removing/resetting anchors on existing Brifen Z-Post installations or in new Z-Post installations to anticipate barrier section (LON) upgrades to MASH in the future.

This Z shaped post design has the top rope in a U-channel and the 3 woven lower ropes positioned on the posts with the use of nylon pegs allowing the high rope to post friction created during crashes to control the deflection of impacting vehicles. The woven rope design improves system performance and ease of maintenance while providing predictable deflections regardless of length between terminals.

Brifen MASH Gating Terminal has been successfully tested to MASH16 with FHWA Eligibility Letter HSST1/CC137 and certain other MASH 2016 tests.
