Introducing...

Brifen's MASH O-Post System

Brifen Wire Rope Safety Fence (WRSF) is a high-tension cable (wire rope) roadside or median safety barrier system originally developed in the 80's and in use in over 30 Countries.

Brifen WRSF is an attractive option to steel W-beam guardrail, concrete or steel box beam barriers. It blends into sensitive local environments and does not impede drainage or cause snow or sand drifting. Its' most important aspect, however, is that it is a cost-effective barrier that is relatively soft to hit and rarely results in injury to vehicle occupants.

Brifen WRSF 4-Rope O-Post System Length of Need has been successfully tested to MASH 2016 with FHWA Eligibility Letter HSST/B-245A. Brifen MASH Gating Terminal has been successfully tested to MASH16 with FHWA Eligibility Letter HSST1/CC137 and certain other MASH 2016 tests.
